

Storage solutions for **HYDROGEN**

www.ecomembrane.com | Follow us on 

ECOMEMBRANE has a worldwide presence with more than 1200 installations and in-depth knowledge of the different markets, climates, regulations and legislation.

Our deep technical experience and ever-expanding work represent solid foundations for developing storage solutions dedicated to **NEW RENEWABLE ENERGY SOURCES - CH₄, CO₂ and H₂.**

H2 Master

PATENTED

The H2 MASTER gasholder is the only 3 membrane gasholder able to safely **store hydrogen gas** with the **lowest investment costs** compared to other existing storage methods.

safety valve**

**bottom
membrane**

H2 Master

Main Characteristics

- Suitable for low-pressure storage of gaseous hydrogen (5-30 mbar)
- Gas flow rate to suit customer requirements
- Fast installation (1-5 days)
Easy maintenance

- Low hydrogen repressurization costs (on the basis of a single compression stage up to 30 Bar)
- Low electricity consumption

- Excellent safety from leaks

- Total control of volume and easy management of signals to the customer PLC

1/2 SPHERE
